Professional Summary

Full-Stack Software Developer with experience building web and cross-platform applications, from front-end to back-end, using **Python (Django, FastAPI, Flask)**, **PHP (Laravel)**, **React**, and **Vue**. Specialized in system modernization, legacy code refactoring, and Artificial Intelligence API integration. Involved across the full software development lifecycle, from requirements gathering to deployment, applying **DevOps** practices (Git, Docker, CI/CD) and Agile methodologies (Scrum) to deliver clean code, maintainable architectures, and reliable deployments.

Professional Experience

- Full-Stack Developer — Academic Assistant**

Technological University of Panama (UTP) — Research Directorate (Alpha Persei)

Apr 2025 – Present

Panama

 - Develop and maintain an institutional scientific research management system using **Django** and **PostgreSQL**.
 - Led the refactoring of legacy modules, optimizing database queries and improving code maintainability.
 - Implemented automatic synchronization of academic profiles through integration with external **REST APIs**.
 - Automated report generation following international standards, reducing the team’s manual workload.
- Full-Stack Developer — Freelance**

WareLogic Solutions

2024 – Present

Remote

 - Develop **FlexWMS**, a warehouse management system (WMS) built with **Laravel**, **Blade**, and **MySQL**, deployed as dedicated instances per client company.
 - Gathered requirements with the client and implemented features such as units of measure (UOM) and LPN assignment.
 - Estimate and quote new development phases and prepare technical implementation plans.
- Full-Stack Developer — Technical Support**

Technological University of Panama (UTP) — Scientific Initiation Conference (JIC)

Feb 2026 – Apr 2026

Panama

 - Provided support and development for the project registration web platform during the enrollment period.
 - Optimized performance and user experience (UI/UX), and implemented new features to streamline enrollment.
 - Identified and fixed security vulnerabilities, strengthening the protection of participants’ data.

Projects

- RiskTrail** | *FastAPI, PostgreSQL/PostGIS, pgRouting, Vue 3, MapLibre*

Finalist, JIC National 2026

 - Dynamic risk assessment system for mountain hiking trails. Finalist at the National Scientific Initiation Conference (JIC) 2026, selected to present at the International Congress of Engineering, Science and Technology (**IESTEC 2026**).
 - Built the geospatial back-end with **FastAPI** and **PostGIS/pgRouting**, and an interactive real-time map front-end with **Vue 3** and **MapLibre**.
- Keel** | *JavaScript, Node.js, npm, Claude Code, Codex, Gemini CLI*

Open Source

 - Open-source, multi-agent, stack-agnostic **Spec-Driven Development (SDD)** framework, published on npm (**keel-sdd**) and installable as a Claude Code plugin.
 - Orchestrates specification, estimation, implementation, verification, and security audit phases for AI coding agents (**Claude Code**, **Codex**, **Gemini CLI**, and **AGENTS.md**).
- Generative AI Chatbot** | *Python, Gemini API, WhatsApp Business API*

 - Customer service bot integrating the **Gemini API** with the **WhatsApp Business API** to generate contextual responses in real time.

Technical Skills

Languages: Python, PHP, JavaScript, TypeScript, SQL, HTML, CSS
Back-End: Django, FastAPI, Flask, Laravel, Node.js, REST APIs
Front-End & Cross-Platform: React, Next.js, Vue.js, React Native, Tailwind CSS, Blade
Databases: PostgreSQL, PostGIS, MySQL, MariaDB, SQL Server
DevOps & Tools: Git, GitHub, Docker, CI/CD, Linux, Vercel, Postman
AI & Agents: Spec-Driven Development (SDD), AI coding agents (Claude Code, Codex, Gemini CLI), LLM integration, Gemini API, RAG, embeddings, NLP
Methodologies & Concepts: Scrum, Agile, MVC Architecture, Legacy Code Refactoring, Requirements Gathering

Education

- Technological University of Panama (UTP)**

Bachelor’s Degree in Software Development and Management

Panama

Mar 2023 – Dec 2026 (expected)

 - Thesis: configurable **Django** platform to centralize the evaluation of scientific research projects.
